Backpacker 2001-03 Backpacker brings the outdoors straight to the reader's doorstep, inspiring and enabling them to go more places and enjoy nature more often. The authority on active adventure, Backpacker is the world's first GPS-enabled magazine, and the only magazine whose editors personally test the hiking trails, camping gear, and survival tips they publish. Backpacker's Editors' Choice Awards, an industry honor recognizing design, feature and product innovation, has become the gold standard against which all other outdoor-industry awards are measured. Economic Dynamism in the Asia-Pacific Grahame Thompson 2005-10-18 This broad-ranging student textbook examines the rise of the Asia-Pacific as an important economic region. It looks at the sources of that rise, its future development and the possible consequences for the global economy. The analysis is divided into three sections considering: * how far the Asia-Pacific has developed as a regional system, looking at the patterns of integration of the principal economies * the relationship between the key

individual economies of Japan, Korea, China and the United States * how the rise of the Asia-Pacific economy has affected the international economic system. In so doing it provides much-needed insights not only into the growth of this powerful economic region, but also the international context of Asia-Pacific development.

Technological Learning in the Transition to a Low-Carbon Energy System Martin Junginger 2019-11-25
Technological Learning in the Transition to a Low-Carbon Energy System: Conceptual Issues, Empirical Findings, and Use in Energy Modeling quantifies key trends and drivers of energy technologies deployed in the energy transition. It uses the experience curve tool to show how future cost reductions and cumulative deployment of these technologies may shape the future mix of the electricity, heat and transport sectors. The book explores experience curves in detail, including possible pitfalls, and demonstrates how to quantify the 'quality' of experience curves. It discusses how this tool is implemented in models and addresses methodological challenges and solutions. For each technology, current market trends, past cost reductions and underlying drivers, available experience curves, and future prospects are considered. Electricity, heat and transport sector models are explored in-depth to show how the future deployment of these technologies—and their associated costs—determine whether ambitious decarbonization climate targets can be reached – and at what costs. The book also addresses lessons and recommendations for policymakers, industry and academics, including key technologies requiring further policy support, and what scientific knowledge gaps remain for future research. Provides a comprehensive overview of trends and drivers for major energy technologies expected to play a role in the energy transition Delivers data on cost trends, helping readers gain insights

on how competitive energy technologies may become, and why Reviews the use of learning curves in environmental impacts for lifecycle assessments and energy modeling Features social learning for cost modeling and technology diffusion, including where consumer preferences play a major role

Developmentalism and Dependency in Southeast Asia Jason P. Abbott 2003-08-29 This book provides a detailed cross-country study of the automotive industry in South East Asia. Abbott argues that, contrary to prevailing opinion, the diffusion of manufacturing in the Asia-Pacific has been characterized by hierarchical networks of production linked to

Japan for technology.
