Health Planning Reports: Subject index. 4 v United States. Health Resources Administration 1978

Handbook of Evidence-Based Practices for Emotional and Behavioral Disorders Hill M. Walker 2015-12-15 This

authoritative volume provides state-of-the-art practices for supporting the approximately 20% of today's K-12 students who have emotional and behavioral disorders (EBD) that hinder school success. Leading experts present evidence-based approaches to screening, progress monitoring, intervention, and instruction within a multi-tiered framework. Coverage encompasses everything from early intervention and prevention to applications for high-risk adolescents. Exemplary programs are described for broad populations of EBD students as well as those with particular disorders, including autism spectrum disorders and externalizing behavior problems. The book combines theory and research with practical information on how to select interventions and implement them with integrity.

Fools, Knaves and Heroes Jeffrey Archer 1998-07

Transition-Age Youth Mental Health Care Vivien Chan 2021-03-10 Over the course of the last two decades, improved practices in child and adolescent mental healthcare have led to a decreased environment of stigma, which also led to an increased identification and treatment of mental health disorders in children and youth. Considering that treatment and outcomes are improved with early intervention, this is good news. However, the success gained in the field of child and adolescent psychiatry leads to a new challenge: transitioning from adolescent care to adult care. It has been known for some time that children, adult, and geriatric patients all have unique needs where it comes to mental healthcare, yet limited work has been done where it comes to the shifting of the lifespan. Where it comes to the child-adult transition—defined as those in their late teens and early/mid-20s—there can be multiple barriers in seeking mental healthcare that stem from age-appropriate developmental approaches as well as include systems of care needs. Apart from increasing childhood intervention, the problem is exacerbated by the changing social dynamics: more youths are attending college rather than diving straight into the workforce, but for various reasons these youths can be more dependent on their parents more than previous generations. Technology has improved the daily lives of many, but it has also created a new layer of complications in the mental health world. The quality and amount of access to care between those with a certain level of privilege and those who do not have this privilege is sharp, creating more complicating factors for people in this age range. Such societal change has unfolded so rapidly that training programs have not had an opportunity to catch up, which has created a crisis for care. Efforts to modernize the approach to this unique age group are still young, and so no resource exists for any clinicians at any phase in their career. This book aims to serve as the first concise guide to fill this gap in the literature. The book will be edited by two leading figures in transition age youth, both of whom are at institutions that have been at the forefront of this clinical work and research. This proposed mid-sized guide is therefore intended to be a collaborative effort, written primarily by child and adolescent psychiatrists, and also with adult psychiatrists. The aim is to discuss the developmental presentation of many common mental health diagnoses and topics in chapters, with each chapter containing clinically-relevant "bullet points" and/or salient features that receiving providers, who are generally, adult-trained, should keep in mind when continuing mental health treatment from the child and adolescent system. Chapters will cover a wide range of challenges that are unique to transition-age youths, including their unique developmental needs, anxiety, mood, and personality disorders at the interface of this development, trauma and adjustment disorders, special populations, and a wide range of other topics. Each chapter will begin with a clinical pearl about each topic before delving into the specifics. **Defense Health Care** U S Government Accountability Office (G 2013-06 GAO provided updated information on the Department of Defense's (DOD) efforts to improve the Civilian Health and Medical Program of the Uniformed Services' (CHAMPUS) management and quality of mental health care services. GAO found that: (1) recent DOD management initiatives, payment controls, and demonstration projects that employ utilization management techniques have reduced mental health care costs and improved the quality of care; (2) DOD medical records reviews have identified poor record documentation, potentially inappropriate admissions, excessive hospital stays, and poor-quality care; (3) residential treatment center inspections have identified unlicensed and unqualified staff, inappropriate use of patient seclusion and medication, inadequate staff-to-patient ratios, and inadequate treatment documentation; and (4) DOD has planned to change the CHAMPUS facility reimbursement methodology because it has paid psychiatric facilities more for comparable services than other federal programs.

Improving the Quality of Health Care for Mental and Substance-Use Conditions Institute of Medicine 2006-03-29 Each year, more than 33 million Americans receive health care for mental or substance-use conditions, or both. Together, mental and substance-use illnesses are the leading cause of death and disability for women, the highest for men ages 15-44, and the second highest for all men. Effective treatments exist, but services are frequently fragmented and, as with general health care, there are barriers that prevent many from receiving these treatments as designed or at all. The consequences of this are serious—“for these individuals and their families; their employers and the workforce; for the nation’s economy; as well as the education, welfare, and justice systems. Improving the Quality of Health Care

for Mental and Substance-Use Conditions examines the distinctive characteristics of health care for mental and substance-use conditions, including payment, benefit coverage, and regulatory issues, as well as health care organization and delivery issues. This new volume in the Quality Chasm series puts forth an agenda for improving the quality of this care based on this analysis. Patients and their families, primary health care providers, specialty mental health and substance-use treatment providers, health care organizations, health plans, purchasers of group health care, and all involved in health care for mental and substance-use conditions will benefit from this guide to achieving better care.

Catalog of Federal Domestic Assistance, 1999 Barry Leonard 1999-06 Contains 1,412 assistance programs administered by 57 Federal agencies in agriculture, crime control, education, employment and training, health and human services, housing and homeownership, and science and technology.
