The News: A User’s Manual Alain De Botton 2014-02-11 The news is everywhere. We can’t stop constantly checking it on our computer screens, but what is this doing to our minds? We are never really taught how to make sense of the torrent of news we face every day, writes Alain de Botton (author of the best-selling *The Architecture of Happiness*), but this has a huge impact on our sense of what matters and of how we should lead our lives. In his dazzling new book, de Botton takes twenty-five archetypal news stories—including an airplane crash, a murder, a celebrity interview and a political scandal—and submits them to unusually intense analysis with a view to helping us navigate our news-soaked age. He raises such questions as Why are disaster stories often so uplifting? What makes the love lives of celebrities so interesting? Why do we enjoy watching politicians being brought down? Why are upheavals in far-off lands often so boring? In *The News: A User’s Manual*, de Botton has written the ultimate guide for our frenzied era, certain to bring calm, understanding and a measure of sanity to our daily (perhaps even hourly) interactions with the news machine. (With black-and-white illustrations throughout.)

The book presents a panorama of situations with countries such as France, Germany, Cyprus, Malta, Italy, Spain, Poland, Turkey, Greece, Bulgaria, Albania, Romania and Serbia. It explores various aspects of the weight and ecology of the Mediterranean languages, discusses LPP in the light of international law and the protection of human rights, bilingual education and foreign language acquisition policies. It also addresses the issue of feminization in a broad range of Mediterranean languages comparing French, Italian, Spanish, and, for the first time, Standard and Cypriot Greek. It builds on the premise that a successful approach to urban and cultural landscape conservation recognizes cultural as well as natural values, sustains traditional connections to place, and engages people in stewardship where they live and work. It brings together academics within the humanities and humanistic social sciences, conservation and preservation professionals, practitioners, and stakeholders to rethink the meaning and practice of cultural heritage conservation, encourage international cooperation, and stimulate collaborative research and scholarship.

Little Elf: A Celebration of Harry Langdon Chuck Harter & Michael J. Hayde Harry Langdon, a comic who appeared in Vaudeville, silent movies, and sound film comedies, held a unique position in Hollywood history. After a slow start in movies, he joined Keystone, the famous Mack Sennett studio. Langdon’s screen character was quite different from the broad slapstick that was popular at the time. When paired with director Frank Capra in films such as *The Strong Man* (1926), *Tramp, Tramp, Tramp* (1926), and *Long Pants* (1927), he rivaled Charlie Chaplin, Buster Keaton, and Harold Lloyd. Chuck Harter and Michael J. Hayde’s biography includes a comprehensive Filmography. Lavishly illustrated. “You can hear the laughter flowing through the book. Langdon’s comic timing was about taking enough time to figure out a situation. The reader should do the same, and not rush through these wonderful pages.” - Brad Linaweaver, *Mondo Club* “[The authors] have done a great service for comedy aficionados and historians, offering up a cornucopia of information on every one of Langdon’s screen appearances, rare photos, vintage magazine articles, and more. If you have any interest in Harry Langdon, this book is invaluable. - Leonard Maltin in *Leonard Maltin’s Movie Crazy*

A Guide to Orchestral Music Ethan Mordden 1980 An accessible yet comprehensive guide for the radio listener, record collector, and occasional concertgoer describes more than seven hundred musical pieces and their composers, proceeding chronologically from Vivaldi to Hans Werner Henze *The Green Roof Manual* Linda McIntyre 2010-08-11 Green roofs—the ultimate in sustainable building practices—continue to generate enormous interest and enthusiasm among architects, landscape designers, and urban planners. Increasingly strict stormwater regulations and the appeal of LEED-related projects have also boosted the popularity and desirability of green roofs. Those who want to build green roofs, however, have few resources to guide them. Until now, no book has taken a comprehensive look at how to effectively adapt green-roof technology to the variable and extreme North American climate, and how to design projects that will function and endure as successfully as those in Germany, Switzerland, and other European countries. This book fills the gap by providing an overview of practices and techniques that have been effective in North America. The authors offer options regarding structure, function, horticulture, and logistics, as well as surveys of actual projects and analyses of why they have or haven’t succeeded. Approachable and reader-friendly, the manual clearly explains how these complex systems function and how to plan and carry out projects successfully from concept through construction and maintenance. Ideally suited to professionals (including architects, landscape architects, engineers, and designers) and their clients, it brings together key lessons from leaders in the field. Numerous photographs highlight the range of design possibilities and show green roofs both during construction and at various stages of maturity. At last, those seeking basic information about how to design and build green roofs have a concise, authoritative guide to this exciting new technology.

Zooplankton Diversity and Pelagic Food Webs Marina Manca 2021-05-04 Zooplankton are of key importance in the structure and functioning of aquatic food webs. They contribute to a large part of the functional and structural biodiversity of predator and prey plankton communities. Promptly responding to long-term and seasonal changes in the physical and chemical environment, they are sensitive indicators of patterns and mechanisms of impact drivers, both natural and human induced. In this volume, we aim to present evidence for both long-term and seasonal changes in zooplankton community structure and dynamics, investigating different approaches from population dynamics to advanced molecular techniques and reconstructing past communities from subfossil remains in lake sediments.

Manual of Romance Phonetics and Phonology Christoph Gabriel 2021-11-22 This handbook is structured in two parts: it provides, on the one hand, a comprehensive (synchronic) overview of the phonetics and phonology (including prosody) of a breadth of Romance languages and focuses, on the other hand, on central topics of research in Romance segmental and suprasegmental phonology, including comparative and diachronic perspectives. Phonetics and phonology have always been a core discipline in Romance linguistics: the wide synchronic variety of languages and dialects derived from spoken Latin is extensively explored in numerous corpus and atlas projects, and for quite a few of these varieties there is also more or less ample documentation of at least some of their diachronic stages. This rich empirical database offers excellent testing grounds for different theoretical approaches and allows for substantial insights into phonological structuring as well as into (incipient, ongoing, or concluded) processes of phonological change. The volume can be read both as a state-of-the-art report of research in the field and as a manual of Romance languages with special emphasis on the key topics of phonetics and phonology.

Sustainable Living with Environmental Risks Nobuhiro Kaneko 2014-03-11 We are not free from environmental risks that accompany the development of human societies. Modern economic development has accelerated environmental pollution, caused loss of natural habitats, and modified landscapes. These environmental changes have impacted natural systems: water and heat circulation, nutrient cycling, and biodiversity. These changes in natural systems degrade ecosystem services and subsequently increase environmental risks for humans. Environmental risks, therefore, are not only human health risks by pollution, climatic anomalies and natural disasters, but also degradation of ecosystem services on which most people are relying for their lives. We cannot entirely eliminate the risks, because it is not possible to attain zero impact on the environment, but we need to find a mechanism that minimizes environmental risks for human sustainably. This is the idea of the interdisciplinary framework of “environmental risk management” theory, which advocates harmony between economic development and environmental conservation. Based on this theory, the Sustainable Living with Environmental Risk (SLER) programme, adopted by the Japanese Ministry of Education (MEXT) as one of its strategic programmes, has been training graduate students at the Yokohama National University, Japan, from 2009 to 2013 to become future environmental leaders who will take the initiative in reducing the level of environmental risks and in protecting natural resources in the developing nations of Asia and Africa. This book provides students and teachers of this new academic field with a comprehensive coverage of case studies of environmental risks and their practical management technologies not only in Japan but also in developing nations in Asia and Africa.
