*Science as a Career Choice* Bernice T. Ediuson  
1973-09-28 How can we identify the young men and women who, as social and behavioral scientists of tomorrow, will do the needed research to resolve our burgeoning social problems? How can the most

promising be attracted to an investigatory career? How can they become identified with the behaviors, attitudes and values that persons in science share? A provocative body of literature about the psychology of the scientist and his career emerged in the post-Sputnik era. Drs. Ediuson and

Beckman bring together more than seventy of the most significant and representative studies. These range over childhood and family influences, academic experiences, motivations, interests, and intellectual and personality strengths that have been examined as precursors for choosing science as adult work. The psychological mechanisms involved in socializing a young person toward a scientific career are suggested in readings from the outstanding theoreticians in the field. Selections on scientific career lines, decisions and options at various stages of work, and factors influencing goals and career development contribute to the understanding of the psychological life of the highly endowed and well-functioning professional adult. Through showing the certain completeness of effort of what has been learned about the psychology of scientists to date, the authors anticipate a resurgence of interest in the creative individual, a renewed

enthusiasm for application, and a refocusing of research on the issues unique to the social and behavioral research scientist.

*Teaching Language and Content in Multicultural and Multilingual Classrooms* María Luisa Carrió-Pastor 2020-12-18 This edited book explores critical issues relating to Content and Language Integrated Learning (CLIL) and English as a Medium of Instruction (EMI), setting out their similarities and differences to demystify the terms and their implications for classroom practice. The authors show how CLIL and EMI practices are carried out in different institutional contexts and demonstrate how both approaches can benefit language and content acquisition. This book is addressed to second/foreign language teaching staff involved in teaching in English at primary education, secondary education, and higher education levels.

research; science learning; culture, gender, and society and science learning; science teaching; curriculum and assessment in science; science teacher education. Each chapter presents an integrative review of the research on the topic it addresses—pulling together the existing research, working to understand the historical trends and patterns in that body of scholarship, describing how the issue is conceptualized within the literature, how methods and theories have shaped the outcomes of the research, and where the strengths, weaknesses, and gaps are in the literature. Providing guidance to science education faculty and graduate students and leading to new insights and directions for future research, the Handbook of Research on Science Education, Volume II is an essential resource for the entire science education community.

Achieving Next Generation Literacy Maureen Connolly 2016-04-29 As a teacher, what you want most is for your students to learn—to immerse themselves in rich and challenging content and leave your classroom better prepared for school and life. In English language arts and humanities, this includes developing the multifaceted reading, writing, thinking, and communication skills that constitute next generation literacy, including the

ability to \* Read complex text independently \* Develop strong content knowledge through reading, writing, listening, and speaking \* Tailor communication in response to different audiences, tasks, purposes, and disciplines \* Comprehend text as well as critique it \* Value evidence in arguments they read, hear, or develop \* Use technology strategically and capably \* Understand perspectives and cultures that differ from their own But as a teacher, you also know how much is riding on THOSE TESTS—achievement tests from the national assessment consortia, the SAT and ACT, and independent state assessments. Is it possible to help students succeed on mandated tests without sacrificing your values, your creativity, and their education? Yes, it is possible. This book shows you how. This not a test-prep book. It is not about “drill and kill” practices that narrow learning so that students will pass an exam. Instead, authors

Maureen Connolly and Vicky Giouroukakis present a lesson planning approach for the secondary classroom that generates test success as a byproduct of comprehensive literacy learning. After a comparative analysis of how current ELA assessments measure literacy, they model a backward design-based process for using these test items as a tool to create engaging and effective instruction. With 6 sample lessons, 42 instructional techniques, and tips for differentiation, this practical resource will empower you to help the students you love become capable, literate individuals who are also well-prepared to ace high-stakes tests.
