**Using Future Internet Technologies to Strengthen Criminal Justice** John S. Hollywood 2015 "Future World Wide Web technologies commonly labeled as being part of Web 3.0 and Web 4.0 could substantially change how the criminal justice enterprise operates. These notably include Semantic Web technologies, intelligent agents, and the Internet of Things. In September 2014, RAND conducted an expert panel for the National Institute of Justice to discuss how the criminal justice community can take advantage of (and reduce the risks from) these emerging technologies. The top unifying theme from the panel was to leverage web technologies to improve information-sharing and protection across the criminal justice enterprise, and to address challenges that the new technologies raise. Another major theme was improving practitioners' knowledge of web technologies. Priorities included general education on key web technologies, and model policies and procedures for using them. A third theme was to improve the networking infrastructure needed to support web technologies (and other applications), especially for courts and corrections. Fourth, several needs became apparent related to leveraging wearable and embedded sensors (part of the Internet of Things), with an emphasis on using sensors to improve officer health and safety. Finally, panelists frequently noted the importance of civil rights, privacy rights, and cybersecurity protections in using the emerging technologies for criminal justice. While there were few needs about these topics specifically, panelists noted that more than half of the needs raised security, privacy, or civil rights concerns, or had implied requirements on these topics"--Publisher's description.

Euro Firefighter Paul Grimwood 2008 Paul Grimwood has responded and worked from over a hundred fire stations in the USA and Europe. In this, his third book, he demonstrates how the very best strategies and tactical approaches from Europe and

the USA may be effectively combined to enhance firefighter tactics and safety at structure fires. The book also covers and exceeds the 2007 syllabus of the European (UK) EDEXCEL CFBT Instructor Qualification (90 hours) for practical Fire Behavior Training (flashover training in ISO shipping containers and other FDS units). Euro Firefighter is for the CFBT instructor, firefighter, company officer and fire chief. The concept of teaching about flashover using ISO steel shipping containers was developed in Europe -- now read how European instructors teach fire behavior using a vast array of Fire Development Simulators (FDS). This book will also take you out onto the fire-grounds of London, New York, Madrid, Chicago, Paris, Germany and Sweden, demonstrating how similar fires are fought using different strategic approaches and showing how US and EURO firefighting tactics are gradually aligning in many areas. From tactical ventilation to air management, from Rapid Intervention Teams to high-rise firefighting and limited staffing, the author brings you the best tactics from Europe and the USA in one training manual! Written in such a way that the training officer can immediately transfer key learning points directly into training presentations, the core principles of this training package enhance firefighter safety on the fire-ground. The book also provides a LINK CODE for ongoing updates and web-based downloads. Euro Firefighter covers a broad range of issues important to anyone who steps off a fire truck at the scene of an emergency.

**Fully Involved Leadership** Gary Ludwig 2019-03-14 One of the fire service's most well-known and respected leaders reveals principles and events that have shaped his and other chief's careers and leadership values that no "cookie-cutter" leadership or management book can provide. The real-world experiences and lessons that are vividly detailed in the book provide a roadmap for any aspiring firefighter wishing to be promoted, a company or chief officer looking to go to the next level, or a fire chief who wishes to further develop their leadership skills. Fully Involved Leadership, written by Chief Gary Ludwig addresses the tenets of leading firefighters at all ranks and levels, and provides a blueprint for not only motivating firefighters but inspiring them; not showing them how much you know, but how much you care; that leadership is not a position or title - it is an action and examples; reminding you that rank does not equate to leadership, the inverted table of organization, and much more! Fully Involved Leadership is filled with powerful leadership topics and at its core addresses the values of trust; the two key qualities needed to be a fire service leader - character and competence; how to keep your emotions in check by using I before E - intelligence before emotions; how to keep from making a wrong decision; why it is important to show honor to your firefighters, plus a whole lot more! Chief Ludwig offers warm and engaging stories of not only his experiences but other chief officers and how they learned from their mistakes when it comes to leadership. Chief Ludwig provides insights and hard lessons learned that makes you reflect upon the question, "Who would you follow if your life depended upon it?"
