Innovative Materials Development and Testing Thomas P. Wilson 1993 This pothole repair experiment, conducted as part of the Strategic Highway Research Program H-106 project, is the most extensive attempt to date to improve the state of the practice for pothole repair operations. Pothole repair in asphalt concrete pavements is one of the most commonly performed maintenance operations for most agencies, especially in areas where cold winters and warm, wet springs contribute to accelerated pavement breakup every year. The SHRP H-106 project is the first major effort undertaken to test cold-mix asphalt patching materials, those most commonly used for winter and springtime pothole repairs. The primary goal of this project was to identify those materials and techniques that are potentially the most cost effective.

Crap CVs Jenny Crompton 2014-10-09 Application for Employment I refer to the recent death of the Technical Manager at your company and hereby apply for the replacement of the deceased manager. Each time I apply for a job, I get a reply that there is no vacancy but in this case I have caught you red-handed and you have no excuse because I even attended the funeral to be sure that he was truly dead and buried before applying. Attached to my letter is a copy of my CV and his death certificate. Crap CVs is a hilarious compilation of the worst job applications imaginable, including overly-honest cover letters, embarrassing typos, mortifying personal revelations, awkward interview questions, misplaced self-confidence, self-aggrandizing gibberish, blatant truth-twisting and, of course, outright lies.

Principles of Engineering Thermodynamics, SI Edition John R. Reisel 2021-02-16 Master the fundamentals of thermodynamics and learn how to apply these skills in engineering practice today with Reisel's Principles of Engineering Thermodynamics, SI, 2nd Edition. This edition's informal writing style helps make abstract concepts easier to understand. In addition to mastering fundamental principles and applications, you explore the impact of different system parameters on the performance of devices and processes. For example, you study how changing outlet pressure in a turbine changes the power produced or how the power requirement of a compressor varies with inlet temperature. This unique approach strengthens your understanding of how different components of thermodynamics interrelate, while demonstrating how you will use thermodynamics in your engineering career. You also learn to develop computer-based models of devices, processes and cycles as well as practice using internet-based programs and computer apps to find thermodynamic data, exactly like today's practicing engineers. Introduction to Radar Using Python and MATLAB Lee Andrew (Andy) Harrison 2019-10-31 This comprehensive resource provides readers with the tools necessary to perform analysis of various waveforms for use in radar systems. It provides information about how to produce synthetic aperture (SAR) images by giving a tomographic formulation and implementation for SAR imaging. Tracking filter fundamentals, and each parameter associated with the filter and how each affects tracking performance are also presented. Various radar cross section measurement techniques are covered, along with waveform selection analysis through the study of the ambiguity function for each particular waveform from simple linear frequency modulation (LFM) waveforms to more complicated coded waveforms. The text includes the Python tool suite, which allows the reader to analyze and predict radar performance for various scenarios and applications. Also provided are MATLAB® scripts corresponding to the Python tools. The software includes a user-friendly graphical user interface (GUI) that provides visualizations of the concepts being covered. Users have full access to both the Python and MATLAB source code to modify for their application. With examples using the tool suite are given at the end of each chapter, this text gives readers a clear understanding of how important target scattering is in areas of target detection, target tracking, pulse integration, and target discrimination.
