**The Book of L** G. Rozenberg 2012-12-06 This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to

be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

The Impossible Will Take a Little While Paul Loeb 2014-04-29 In The Impossible Will Take a Little While, a phrase borrowed from Billie Holliday, the editor of *Soul of a Citizen* brings together fifty stories and essays that range across nations, eras, wars, and political movements. Danusha Goska, an Indiana activist with a paralyzing physical disability, writes about overcoming political immobilization, drawing on her history with the Peace Corps and Mother Teresa. Vaclav Havel, the former president of the Czech Republic, finds value in seemingly doomed or futile actions taken by oppressed peoples. Rosemarie Freeney Harding recalls the music that sustained the civil rights movement, and Paxus Calta-Star recounts the powerful vignette of an 18-year-old who launched the overthrow of Bulgaria's dictatorship. Many of the essays are new, others classic works that continue to inspire. Together, these writers explore a path of heartfelt community involvement that leads beyond despair to compassion and hope. The voices collected in The Impossible Will Take a Little While will help keep us all working for a better world despite the obstacles.

*Securing Outer Space* Natalie Bormann 2009-01-30 The challenges that space poses for political theory are profound. Yet until now, the exploration and utilization of space has generally reflected – but not challenged – the political patterns and impulses which characterized twentieth-century politics and International Relations. This edited volume analyses a number of controversial policies, and contentious strategies which have promoted space activities under the rubric of exploration and innovation, militarization and weaponization,

colonization and commercialization. It places these policies and strategies in broader theoretical perspective in two key ways. Firstly, it engages in a reading of the discourses of space activities: exposing their meaning-producing practices; uncovering the narratives which convey certain space strategies as desirable, inevitable and seamless. Secondly, the essays suggest ways of understanding, and critically engaging with, the effects of particular space policies. The essays here seek to 'bring back space' into the realm of International Relations discourse, from which it has been largely removed, marginalized and silenced. The various chapters do this by highlighting how activities in outer space are always connected to earth-bound practices and performances of the every day. *Securing Outer Space* will be of great interest to students of space power, critical security studies and IR theory.
