Multiple Affordances of Language Corpora for Data-driven Learning Agnieszka Leńko-Szymańska 2015-05-15 In recent years, corpora have found their way into language instruction, albeit often indirectly, through their role in syllabus and course design and in the production of teaching materials and other resources. An alternative and more innovative use is for teachers and students alike to explore corpus data directly as part of the learning process. This volume addresses this latter application of corpora by providing research insights firmly based in the classroom context and reporting on several state-of-the-art projects around the world where learners have direct access to corpus resources and tools and utilize them to improve their control of the language systems and skills or their professional expertise as translators. Its aim is to present recent advances in data-driven learning, addressing issues involving different types of corpora, for different learner profiles, in different ways for different purposes, and using a variety of different research methodologies and perspectives.

Higher Education has been under assault for several decades as neoliberalism's preference for market-based reforms sweeps across the US political economy. The recent push for neoliberalizing the academy comes at a time when it is ripe for change, especially as it continues to confront growing financial pressure, particularly in the public sector. The resulting cutbacks in public funding, especially to state universities, led to a variety of debilitating changes: increases in tuition, growing student debt, more students combining working and schooling, declining graduation rates for minorities and low-income students, increased reliance on adjuncts and temporary faculty, and most recently growing interest in mass processing of students via online instruction. While many serious questions arise once we begin to examine what is happening in higher education today, one particularly critical question concerns the implications of these changes on the relationship of education to as yet still unrealized democratic ideals. The 12 essays collected in this volume create important resources for students, faculty, citizens and policymakers who want to find ways to address contemporary threats to the higher education-democracy connection. This book was originally published as a special issue of *New Political Science*.

Mobile Broadband Communications for Public Safety: The Road Ahead Through LTE Technology Ramon Ferr?s

2015-10-12 Public Protection and Disaster Relief (PPDR) agencies rely on the use of Private/Professional Mobile Radio (PMR) technologies such as TETRA, TETRAPOL, and APCO 25 which were conceived in the 1990s, in parallel with the second generation (2G) of mobile communications systems. Whilst PMR systems offer a rich set of voice-centric services, with a number of features matched to the special requirements of PPDR, the data transmission capabilities of these PMR technologies are rather limited and lag far behind the technological advances made in the commercial wireless domain. As a result, Long Term Evolution (LTE) technology for mobile broadband PPDR is increasingly backed as the technology of choice for future PPDR communications, and technical work is currently being undertaken within the 3rd Generation Partnership Project (3GPP), the organisation in charge of LTE standardisation, to add a number of improved capabilities and features to the LTE standard that will further increase its suitability for PPDR and other professional users. This book provides a timely and comprehensive overview of the introduction of LTE technology for PPDR communications. It looks at operational scenarios and emerging multimedia and data-centric applications which have the potential to improve the efficiency of disaster recovery operation. There is a discussion of the main techno-economic drivers which are believed to be pivotal for an efficient and cost-efficient delivery of mobile broadband PPDR communications. The capabilities and features of the LTE standard for improved support of mission-critical communications are also covered, as is the applicability of Mobile Virtual Network Operator (MVNO) models for the delivery of PPDR services through commercial networks. This book offers a wide and deep analysis of the incoming evolution of PPDR domain, covering user need and technologies, normative and economic topics including those in the framework of commercial and PPDR domains' convergence and interoperability. It provides a highly original reference to the driving subjects and trend of PPDR evolution worldwide. Chapter headings include:- Public Protection and Disaster Relief communications / Private Mobile Radio systems / Mobile Broadband data needs and requirements / Mobile Broadband systems for PPDR communications / LTE technology for PPDR / Supplementing LTE / Spectrum use for PPDR / MVNO model for PPDR / Interconnection of PPDR networks / State of play

Technology and the Disruption of Higher Education Henry C Lucas Jr 2016-07-07 Universities for years have been the bright spot in our educational system. Today, these institutions are under siege from multiple constituencies including students, parents, legislators, government officials and their own faculties. Education has historically been a way for students to improve their lives and fortunes. However, the rising costs of college are a barrier to access for many students, reducing their chances for upward mobility. Is technology the solution, or is it just another costly problem for universities? The purpose of this book is to explore how new technology has the potential to transform higher education. However, this same technology also has the potential to disrupt universities. Much depends on how administrators, faculty and students apply technologically enhanced learning. *Technology and the Disruption of Higher Education* presents details on MOOCs, blended, flipped and online classes and their role in transforming higher education based on the author's experiences teaching all of these types of courses. These technology-enabled approaches to teaching and learning offer tremendous opportunities to schools, but they also threaten the traditional university. The book identifies some of these threats and opportunities and offers suggested strategies to take advantage of the technology. Is this technology enough to save the university system? While

new ways of teaching and learning are exciting, they are only part of the puzzle. Radical change beyond what happens in the classroom is needed if our higher education system is to continue to flourish and some of these ideas are discussed in the last chapter of the book. The book is a call to action for educators to realize that the technology is both transformational and disruptive, and that some universities are going to fail in the next 15 years.
