Bursting the Bubble: Rationality in a Seemingly Irrational Market David F. DeRosa 2021-04-02 The presence of speculative bubbles in capital markets (an important area of interest in financial history) is widely accepted across many circles. Talk of them is pervasive in the media and especially in the popular financial press. Bubbles are thought to be found primarily in the stock market, which is our main interest, although bubbles are said to occur in other markets. Bubbles go hand in hand with the notion that markets can be irrational. The academic community has a great interest in bubbles, and it has produced scholarly literature that is voluminous. For some economists, doing bubble research is like joining the vanguard of a Kuhnian paradigm shift in economic thinking. Not so fast. If bubbles did exist, they would pose a serious challenge to neoclassical finance. Bubbles would contradict the ideas that markets are rational or work in an informationally efficient manner. That’s what makes the topic of bubbles interesting. This book reviews and evaluates the academic literature as well as some popular investment books on the possible existence of speculative bubbles in the stock market. The main question is whether there is convincing empirical evidence that bubbles exist. A second question is whether the theoretical concepts that have been advanced for bubbles make them plausible. The reader will discover that I am skeptical that bubbles actually exist. But I do not think I or anyone else will ever be able to

conclusively prove that there has never been a bubble. From studying the literature and from reading history, I find that many famous purported bubbles reflect inaccurate history or mistakes in analysis or simply cannot be shown to have existed. In other instances, bubbles might have existed. But in each of those cases, there are credible rational explanations. And good evidence exists for the idea that even if bubbles do exist, they are not of great importance to understanding the stock market.

The Modern House Jonathan Bell 2015 The modern House reflects upon the complicated relationship architecture has with the terms "Modernist", "Modernism" and "Modern" specifically in relation to the potent concept of the home, reflecting in part the narrative of how some of the most important examples of Modern houses were commissioned and built in the UK. These special examples of British Modernism include such progressive experiments on communal urban living as London's Isokon Building, completed in 1934 by eminent architect Wells Coates, and Berthold Lubetkin's Highpoint, which is today considered one of the most prominent examples of the early International Style. Compared with these urban enormities are private houses, such as the Laslett House in Cambridge, 1958, by the architect Trevor Dannatt, or the Winter House, designed by John Winter as his own residence. Included are an extended introductory essay by acclaimed architectural journalist Jonathan Bell, former architecture editor for Wallpaper* and contributing editor at Blueprint, and projects such as those designed by renowned architect Carl Turner, responsible for the low energy Slip House, a cantilevered sculptural abode of translucent glass, steel and concrete. With images of yet to be seen interiors and restorations, The Modern House illuminates the convergent characteristics of functionalism, truth to materials, flowing space and natural light within the Modern home as a space for living.
