Comprehending as competently as harmony even more than supplementary will have the funds for each success. bordering to, the revelation as with ease as perception of this Tvee Model 25 Manual can be taken as skillfully as picked to act.

Nonequilibrium Hypersonic

Aerothermodynamics Chul Park 1990-03-01

Describes the interaction between the fluid flow and the high temperature phenomena experienced in the hypersonic regime.

Presents the principles of aerothermodynamics in nonequilibrium hypersonic flow regimes, covering theory, application and surface phenomena. Chapters 1 to 5 explain how to develop computational fluid dynamics (CFD) techniques for computing nonequilibrium, chemically reacting flows in the hypersonic regime. Chapters 6 to 8 examine the important physical phenomena that occur in hypersonic flows. The final chapter is devoted to the nonequilibrium kinetics at solid surfaces, which is useful in addressing the problems of the nonequilibrium gas-surface interactions that arise in hypersonic flight.

What does Good Education Research Look

Like? Lyn Yates 2004-03-16 "a powerful, well informed argument for the importance of pluralism... This book will tell young researchers what they need to know about doing educational research; it will encourage experienced researchers to see their own practice in context. It is a profound book that everyone should read."

- Professor Jane Gaskell, Dean, OISE, University of Toronto "This brilliant guide to judging educational research examines the most basic questions about research practice that most people think are settled, and reveals them as problematic...

Humorous, sharp, and thoughtful, this readable inquisition explores from differing perspectives 'what does good education research look like' in multiple forms including dissertations, journal articles, and

grant proposals.” – Sari Knopp Biklen, Laura and Douglas Meredith Professor, Syracuse University, USA This book explains and critically examines some key debates about the quality and value of education research, and shows how it must meet different demands in different places, times and conditions. A major part of the book provides detailed analyses and guidance to different areas in which education research is judged: from academic theses to the press; from highest level competition for prestigious grants to collaborative work with practitioners. Lyn Yates asks probing questions in six education research arenas – the thesis, the research grant application, the journal article, the consultancy application, book publishing, and the press: Who are the judges here? What expectations and networks do they bring to the task? What are the explicit and implicit criteria for good research in that area? What are the common failings? What does good research look like? The book is an indispensable companion to existing textbooks on research methodology. It provides a clear and provocative discourse about the banalities and disorderliness in which education researchers have to operate.

Engaging the Senses: Object-Based Learning in Higher Education

Helen J. Chatterjee 2016-03-09 The use of museum collections as a path to learning for university students is fast becoming a new pedagogy for higher education. Despite a strong tradition of using lectures as a way of delivering the curriculum, the positive benefits of ‘active’ and ‘experiential learning’ are being recognised in universities at both a strategic level and in daily teaching practice. As museum artefacts, specimens and art works are used to evoke, provoke, and challenge students’ engagement with their subject, so transformational learning can take place. This unique book presents the first comprehensive exploration of ‘object-based learning’ as a pedagogy for higher education in a broad context. An international group of authors offer a

spectrum of approaches at work in higher education today. They explore contemporary principles and practice of object-based learning in higher education, demonstrating the value of using collections in this context and considering the relationship between academic discipline and object-based learning as a teaching strategy.

The Autobiography Of Nicholas Said

Nicholas Said 2014-04-24 The narrative of Nicholas Said is one of the most impressive among slaves' accounts. Said was born as a free man in Africa, enslaved when 14 years old and traveled to five continents and countless countries. He learned seven languages and finally settled in Alabama. This is an autobiography of his incredible life.

Railway Engineering Satish Chandra

2013-02-02 Railway Engineering has been specially designed for undergraduate students of civil engineering. From fundamental topics to modern technological developments, the book covers all aspects of the railways including various modernization plans covering tracks, locomotives, and rolling stock. Important statistical data about the Indian Railways and other useful information have also been incorporated to make the coverage comprehensive. A number of illustrative examples supplement text to aid easy understanding of design methods discussed. The book should also serve the need of students of polytechnics and those appearing of the AMIE examination and would also be a ready reference for railway professionals.

Profiting with Iron Condor Options Michael Benklifa

2011-01-19 In a straightforward approach, Hanania Benklifa provides readers the practical knowledge needed to trade options conservatively in Profiting with Iron Condor Options: Strategies from the Frontline for Trading in Up or Down Markets. The objectives are simple: make 2%-4% a month staying in the market as little as possible. Market experts use option condors to consistently earn monthly returns while trading conservatively and

staying in the market as little as possible. Benklifa—who manages \$10+ million in condor trades each month—shows you exactly how to run these trades and earn these returns, delivering all the details you need to master every nuance of this remarkable strategy. Benklifa shares option condors examples using market realities, not oversimplified abstractions. You'll learn how to handle real-life market dynamics that can dramatically impact results, including rising and falling volatility, changing bid-ask spreads, and distorted call parity. You'll learn how to profit in the sideways markets where condor options are most widely used—and also in extreme-trending markets that offer their own surprising opportunities. Traders who focus on a specific type of trade have a history of outperforming stock pickers and directional investors. This book will give you that deep and usable level of knowledge about one of today's most well-proven strategies: option condors.

Interviewer's Guide to the Structured Clinical Interview for DSM-IV Dissociative Disorders (SCID-D) Marlene Steinberg 1994-12-01 Designed to accompany the SCID-D, this guide instructs the clinician in the administration, scoring and interpretation of SCID-D interview. The Guide describes the phenomenology of dissociative symptoms and disorders, as well as the process of differential diagnosis. This revised edition includes a set of decision trees and four case studies.

The Social Causes of Husband-wife Violence Murray Arnold Straus 1980 Why is the social group that society most often looks to for warmth, intimacy, and love also characterized by cruelty and violence? This book attempts to answer that seemingly ironic question. The authors examine

aspects of family stress from both social and cultural viewpoints and conclude that violence grows out of the nature of social arrangements and cannot be explained in terms of the personalities of husbands and wives. They emphasize the fundamental contradictions built into family life as it is now constituted, and point out that counseling and family therapy alone will not decrease the level of violence in family settings. Real change will come about only with a restructuring of the relations between women and men, and that in turn is dependent upon a fundamental reallocation of power and status in society at large. In their examination of the apparently irrational or bizarre aspects of family life, the authors of this book move beyond the problem of physical violence to an understanding of the nature of the family itself.

A Tale of Two Vampires Katie Macalister 2012-09-04 Time isn't always on a vampire's side.... Iolanthe Tennyson has had a very bad year—due in part to the very bad men in her life. So she's accepted her cousin's invitation to spend the summer in Austria to indulge her photography hobby. Rumors of a haunted forest there draw

Iolanthe into the dark woods—and into the eighteenth century.... Nikola Czerny is a cursed man, forced by his half brothers to live forever as a Dark One. But his miserable existence takes an intriguing turn when a strange, babbling woman is thrown in his path. Iolanthe claims to know Nikola's daughter—three hundred years in the future. She also knows what fate—in the form of his murderous half brothers—has in store for him. If only she knew the consequences of changing the past to save one good, impossibly sexy vampire...

Engineering a Safer World Nancy G.

Leveson 2012-01-13 A new approach to safety, based on systems thinking, that is more effective, less costly, and easier to use than current techniques. Engineering has experienced a technological revolution, but the basic engineering techniques applied in safety and reliability engineering, created in a simpler, analog world, have changed very little over the years. In this groundbreaking book, Nancy Leveson proposes a new approach to safety—more suited to today's complex, sociotechnical, software-intensive world—based on modern systems thinking and systems theory.

Revisiting and updating ideas pioneered by 1950s aerospace engineers in their System Safety concept, and testing her new model extensively on real-world examples, Leveson has created a new approach to safety that is more effective, less expensive, and easier to use than current techniques. Arguing that traditional models of causality are inadequate, Leveson presents a new, extended model of causation (Systems-Theoretic Accident Model and Processes, or STAMP), then shows how the new model can be used to create techniques for system safety engineering, including accident analysis, hazard analysis, system design,

safety in operations, and management of safety-critical systems. She applies the new techniques to real-world events including the friendly-fire loss of a U.S. Blackhawk helicopter in the first Gulf War; the Vioxx recall; the U.S. Navy SUBSAFE program; and the bacterial contamination of a public water supply in a Canadian town. Leveson's approach is relevant even beyond safety engineering, offering techniques for “reengineering” any large sociotechnical system to improve safety and manage risk.

SIMD Programming Manual for Linux and Windows Paul Cockshott 2013-03-09 A

number of widely used contemporary processors have instruction-set extensions for improved performance in multi-media applications. The aim is to allow operations to proceed on multiple pixels each clock cycle. Such instruction-sets have been incorporated both in specialist DSPchips such as the Texas C62xx (Texas Instruments, 1998) and in general purpose CPU chips like the Intel IA32 (Intel, 2000) or the AMD K6 (Advanced Micro Devices, 1999). These instruction-set extensions are typically based on the Single Instruction-stream Multiple Data-stream (SIMD) model in which a single instruction causes the same mathematical operation to be carried out on several operands, or pairs of operands, at the same time. The level or parallelism supported ranges from two floating point operations, at a time on the AMD K6 architecture to 16 byte operations at a time on the Intel P4 architecture.

Whereas processor architectures are moving towards greater levels of parallelism, the most widely used programming languages such as C, Java and Delphi are structured around a model of computation in which operations take place on a single value at a time. This was appropriate when processors worked this way, but has become an impediment to programmers seeking to make use of the performance offered by multi-media instruction-sets. The introduction of SIMD instruction sets (Peleg et al.

Learning to Solve Complex Scientific Problems David H. Jonassen 2017-09-25
Problem solving is implicit in the very nature of all science, and virtually all scientists are hired, retained, and rewarded for solving problems. Although the need for skilled problem solvers has never been greater, there is a growing disconnect between the need for problem solvers and the educational capacity to prepare them. *Learning to Solve Complex Scientific Problems* is an immensely useful read offering the insights of cognitive scientists, engineers and science educators who explain methods for helping students solve the complexities of everyday, scientific problems. Important features of this volume include discussions on: *how problems are represented by the problem solvers and how perception, attention, memory, and various forms of reasoning impact the management of information and the search for solutions; *how academics have applied lessons from cognitive science to better prepare students to solve complex scientific problems; *gender issues in science and engineering classrooms; and *questions to guide future problem-solving research. The innovative methods explored in this practical volume will be of significant value to science and engineering educators and researchers, as well as to instructional designers.

An Introduction to HPLC for Pharmaceutical Analysis Oona McPolin 2009-03-01
If you are new to HPLC, this book provides an invaluable guide to how HPLC is actually used when analysing

pharmaceuticals. It is full of practical advice on the operation of HPLC systems combined with the necessary theoretical knowledge to ensure understanding of the technique. Key features include: A thorough discussion of the stationary phase enabling the reader to make sense of the many parameters used to describe a HPLC column; Practical advice and helpful hints for the preparation and use of mobile phase; A complete overview of each of the different components which together make up a HPLC system; A description of the contents of a typical HPLC analytical method and how to interpret these; A step-by-step guide on how to follow a method and set up a HPLC analysis; A discussion of system suitability criteria and how to interpret the values obtained during an analysis; Explanation of the common methods of calibration and quantification used for pharmaceutical analysis.

Understanding Aleister Crowley's Thoth Tarot Lon Milo Duquette 2017-09-01
Originally published in 2003,

Understanding Aleister Crowley's Thoth Tarot has proved to be the essential guide to accessing the unique symbolism and meaning of Aleister Crowley's remarkable tarot deck along with the deeply textured artwork of Lady Frieda Harris. Crowley authority Lon Milo DuQuette starts by providing an insightful historical background before delving into descriptions of each card in depth, from a tarot perspective and from an expanded, magickal point of view. He first describes the tarot meaning of each card in detail and then explains all the other attributions Crowley intended. This unique guide has been updated with a new introduction that provides information on the unicursal hexagram cards included with the deck but never explained. Replaces ISBN 9781578632763
