Jeep Cherokee XJ Performance Upgrades
Eric Zappe 2015-04-15
The Jeep Cherokee XJ is a pioneering SUV that delivers commendable performance and off-road capability. More than 3 million Cherokee XJs were manufactured during its production run. However, when the XJs rolled off the production lines, they were built primarily for the street. As a result, XJs need crucial modifications and high-performance upgrades to make them better for off-road duty. In this updated edition, author and veteran Cherokee expert Eric Zappe guides you through each stage of an XJ build, so you can take the mild-mannered, bone-stock XJ and upgrade it to a capable off-road performer. Zappe delves into suspension bolt-on improvements, including lift kits to increase ground clearance and suspension travel. He also covers high-performance shocks and long-arm suspensions. Wheels and tires are your vital link to the terrain, and he reveals all the important considerations so you select the right combination. XJs need a heavy-duty steering system to negotiate challenging off-road conditions, and Zappe explains several ways to upgrade the steering. Driveline and axle upgrades are an important part of the performance equation, so these performance improvements are covered as well. But he doesn't stop there; he also explores engine performance improvements for the 2.5-, 2.8-, 4.0-liter engines so the Cherokee has more power for off-road performance. In addition, he covers some basic tips for body strengthening and adding skid plates. If you’re ready to go off road with your Cherokee but you're not planning to build a top-dollar off-road machine, this is the book for you. With the techniques and latest products described in this book, you will be able to upgrade your XJ to much higher level of performance and your XJ will be at home off and on road.

Stories from a Sideways Glance
Dennis Brown 2021-06-10
Do you always believe what you see, or do you sometimes think it’s all part of your imagination? If something is standing right in front of you, how do you know it is real? What if no one else sees it? Can you prove it? “Stories from a Sideways Glance” is a series of wonderful and engaging short stories about characters that might prove real to some readers and imaginary to others. You will likely recognize some of these characters from your own life. These gripping stories that will challenge your challenging our assumptions and push pushing us you to think beyond the normal. Does a ghost leave a footprint? How would you explain wild animals gathering to protect a child from a deranged person, or a crowd sighting a being that left no footprints in the snow? What if someone you cannot prove is real had a profound effect on changes in your life? This life is filled with contradictions. Most of the time, we rationalize these away, but some never go away. We believe what we need to, to get through the next day. One thing for sure, anything that we think is carved in stone often gets proved wrong. Better to keep an open mind, less distance to fall.

Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles
National Research Council 2015-09-28
The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

Car Guys vs. Bean Counters
Bob Lutz 2011-06-09
A legend in the car industry reveals the philosophy that's starting to turn General Motors around. In 2001, General Motors hired Bob Lutz out of retirement with a mandate to save the company by making great cars again. He launched a war against penny pinching, office politics, turf wars, and risk avoidance. After declaring bankruptcy during the recession of 2008, GM is back on track thanks to its embrace of Lutz's philosophy. When Lutz got into the auto business in the early sixties, CEOs knew that if you captured the public's imagination with great cars, the money would follow. The car guys held sway, and GM dominated with bold, creative leadership and iconic brands like Cadillac, Buick, Pontiac, Oldsmobile, GMC, and Chevrolet. But then GM's leadership began to put their faith in analysis, determined to eliminate the "waste" and "personality worship" of the bygone creative leaders. Management got too smart for its own good. With the bean counters firmly in charge, carmakers (and much of American industry) lost their single-minded focus on product excellence. Decline followed. Lutz's commonsense lessons (with a generous helping of fascinating anecdotes) will inspire readers at any company facing the bean counter analysis-paralysis menace.

Perfect No More?
Adrianna Smith 2020-08-30
Deep in her heart was death which believed that a life like hers could be perfect no more with such a ruinous start. Brokenness was all that she knew growing up, threatening callousness of heart. A modern-day Cinderella was make-believe as an opiate of our senses towards the cruelty of life. No good things would last, she came to believe. So, her safest bet was not to strive for them lest her fall would be more crippling from a greater height when life came crushing down on her again. By this she effectively put a curse on herself as she shut out future blessings that could have been hers. Life was an unknown and she did not know how it would turn out. To break this curse, she needed courage, faith and trust to respond to the call of love and let its transforming power to take hold of her so that she could blossom into the person she could be. It did not promise plain sailing but riding through the storms, big and small, was the way of perfecting. To break hopelessness is having the faith to hope. She summoned all her courage to take this bumpy ride on invitation. Did she waver in her resolve? Did she manage to persevere? What did she discover about herself? Where would this bold step finally take her in life?

Opel Gt Gold Portfolio 1968-73
R. M. Clarke 1995-11-20
In the early-1960s Opel displayed a dramatically styled GT concept car at the Frankfurt Motor Show. Public reaction was positive and so it was put into production as the Opel GT in 1968. The initial model was based on the B-Series Opel Kadett and withdrawn after two years. The larger engine 1900GT was much better, but all cars left the factory with left-hand drive. However, it was never a big seller and was withdrawn from the market altogether in 1973. This is a book of contemporary road and comparison tests, new model introductions, development, buying second hand, technical and specification data, long-term tests. Covers the GT and GTJ.
